We wish to object to the proposed busway to the south/east of Cambridge.

Whilst we support plans to improve transport link to the south of Cambridge, this proposed route is hugely damaging to the environment as well as the most expensive option. This plan proposes a new transport corridor across green belt productive farmland whilst there are two existing transport corridors, either of which could be developed at less cost with less environmental impact. These are the A1307 which could be upgraded with a bus lane and the refurbishment of the disused railway line from Great Shelford which runs short distance from the proposed busway and ultimately to Haverhill.

The proposed busway is approximately 5 miles long and does nothing to improve traffic conditions on the A1307, west of the A11, which carries a large number of commuters from Haverhill to Cambridge daily and villages along the route.

The proposed busway will damage significantly the environment across the chalk downland and restrict the farmland being used productively. At a time of economical difficulty, it makes no sense to choose the most expensive plan to attempt to improve the transport links to the south of Cambridge when there are less expensive options available.
