

Annual Traffic Monitoring Reports

The CCC Policy and Insight team produce an Annual Traffic Monitoring Report which summarises traffic trends across the county and is predominately informed by our annual traffic survey data. The latest and historic Annual Traffic Monitoring Reports are provided below. You can also view the locations of and learn more about the annual traffic surveys [here](#).

Latest Annual Traffic Monitoring Report:

Data collection for the traffic monitoring reports takes place in the spring and autumn/winter each year. The data is then checked, cleaned and analysed during the spring/summer of the following year and analysis is presented in the annual traffic monitoring report the following autumn. The most recent report analyses data collected during 2023. The report is available in PDF format and a supporting dashboard is also provided:

[Cambridgeshire County Council Annual Traffic Monitoring Report 2023 \[PDF\]](#)

To get the best from the dashboard, consider maximising the window (see double-headed arrow button in the bottom-right corner of the dashboard window). Press the 'Esc' key to exit full-screen mode.

Cambridgeshire County Council Traffic Survey Results Dashboard

Introduction

This interactive dashboard has been published alongside Cambridgeshire County Council's Annual Traffic Monitoring Report for 2023. The dashboard is designed to provide readers of the report (and visitors to Cambridgeshire and Peterborough Insight) the opportunity to explore the traffic survey data on which the report is based.

The data in this dashboard is gleaned from four traffic surveys undertaken annually by Cambridgeshire County Council, which are scheduled as follows:

Spring Surveys (April/May)

Cambridge River Screenline: 12-hour flows of traffic observed at 14 river crossings in central Cambridge.

Cycle Route Monitoring: 12-hour flows of traffic observed at 17 locations in the Greater Cambridge area.

Autumn Surveys (October/November)

Market Town Radial Cordon: 12-hour flows of traffic going to and from nine towns: Chatteris, Ely, Huntingdon, March, Ramsey, St Ives, St Neots, Whittlesey, and Wisbech.

Cambridge Radial Cordon: 12-hour flows of traffic going to and from Cambridge.

For more detail on survey methodology, please read the 2023 Annual Monitoring Report.

This dashboard was created by Cambridgeshire County Council's Policy and Insight Team, and published on [Cambridgeshire and Peterborough Insight](#).

Please be aware that dashboard pages may change, be added or removed.

If you have any comments, feedback, data queries or suggestions as to how we might improve this dashboard, please contact: policyandinsight@cambridgeshire.gov.uk

Quality Assurance & Data Capture:

Cambridgeshire County Council contracts an external survey company to undertake the four annual surveys on its behalf.

Every effort is made to ensure that the survey methodology is the same every year in order to glean comparable data (and make fair comparisons between years).

For example, CCC insists that surveys are conducted in the same location - or as close as possible to the same location - every year. CCC also checks the data returned from these surveys - and will insist on a repeat if it is not satisfied that the survey at any given site has not been completed to the required standard.

The Autumn surveys of 2022 were, unfortunately, not completed to a satisfactory level - and as such, data from the Cambridge Radial and Market Town Radial surveys from 2022 is not included within either the 2023 Annual Monitoring Report and this dashboard.

If you require 2022 data for either of these surveys, [please get in touch with us](#).
