Dear Ms Choudhury.
My apologies I thought I had included my address.

Subject: Objection to Transport and Work Act Order to the Department for Transport (DfT) for a new busway linking Cambourne to Cambridge I Linda Walker of [REDACTED] 7GZ am writing to make a formal objection to the "Application for a ...

My objection to the bus way is purely based on the destruction of wildlife that will occur as a result of any building works that takes place in the proposed area .

It is a very important site for many natural species of flora and fauna as is any green space The destruction of which can never be repaired or regained.

Our precious natural and ancient habitats should be preserved not destroyed.

So much in this area has already gone; most recently with the construction of Eddington. I have lived in this area; in both Madingley 7 years and Coton 30 years. When the realisation that a huge chunk of our precious habitats were gone forever hit me, it reduced me to tears and now this proposed bus way....

I know you will not be concerned with how this affects people but you NEED to realise the direct and instant effect. Please listen to all the professional ECOLOGISTS who are involved in this project.

The effect of destroying the habitats of hundreds of species does not end with the disappearance on that patch, it has a knock on effect to other habitats and species re. breeding and ultimate survival. Without these species ultimately the human race can not survive. You may baulk at that statement but if we continue as we are, taking away habitats at the pace that we are, eventually there will be nothing left.....

Or ecosystems also depend on our weather systems which are also being challenged with continuous

relentless building . Eg: when old green spaces are removed and replaced with roads, buildings and infrastructure there is not enough green left to absorb the rain, resulting directly or indirectly in flooding.

Again ultimately this will contribute to the destruction of habitats.

We are all part of a natural cycle which needs to be perpetuated in order for survival of every living thing on our planet. If it is destroyed or interrupted then harm is irrevocably done.

Thank you for your attention
